DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Hashimoto et al (US 7,011,266 B2).

Hashimoto discloses a winding machine, having a carrier device (Fig. 25) for winding a winding for an electrical machine, having at least one group comprising a winding template (Z3) and an adjacent deflection element (Z41, Z42), wherein the winding template (Z3) and the adjacent deflection element (Z41, Z42) are displaceable relative to one another (Fig 29-34).

In regards to claim 2, Hashimoto discloses wherein one row of groups is followed by a final winding template (Z3).

In regards to claim 3, Hashimoto discloses the carrier device (23) is rotatable about a pivot axis (CZ2)

In regards to claim 4, Hashimoto discloses the pivot axis (CZ2) is displaceable relative to the carrier device.

In regards to claim 5, Hashimoto discloses winding template (Z3) has an edge (Z3d) on one free end (Z3b).

In regards to claim 6, Hashimoto discloses the winding template (Z3) has at least one separator element (ledges on Z3d) on its cheek sides (Z3d).

In regards to claim 7, Hashimoto discloses the at least one winding template (Z3) has at least two stepped rests, each for at least-one wire, for graduating a coil width within a coil (Fig 27).

In regards to claim 8, Hashimoto discloses the winding template (Z3) comprises at least two winding cheeks (Z31 and Z32, Fig 27, 28) that are adjustable relative to one another.

In regards to claim 9, Hashimoto discloses at least one wire can be delivered via a wire guide and the guide is adjustable in accordance with a progress in winding toward a winding cheek.

With respect to claims 11-17, the method described in these claims would inherently result from the use of the winding machine of Hashimoto as advanced above.

With respect to claims 18, the product produced in this claim would inherently result from the method of using the winding machine of Hashimoto as advanced above.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Evan H. Langdon whose telephone number is (571)272-6948. The examiner can normally be reached on M-F 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kathy Matecki can be reached on (571) 272-6951. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
